DETAILED ACTION

1. The preliminary amendment filed on 4/8/04 has been entered.

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

4. Claims 1-16 are rejected under 35 U.S.C. 103(a) as being unpatentable over Tilger (DE 1 231 100) in view of Meschi (EP 0 716 036).

Tilger discloses the invention substantially as claimed except for a positioning device for one of the pressure applying elements. In that regard, Meschi teaches positioning and pressure applying elements (1) that facilitate tearing of webs. The positioning means allows for better control of the tearing process. See e.g. Abstract.

Art Unit: 3724

Thus, it would have been obvious to the ordinary artisan at the time of the instant invention to provide the invention of Tilger with the positioning device and pressure applying elements as taught by Meschi in order to facilitate more controlled tearing of webs.
